

HIGH BANDWIDTH

Internet Services

Integra Telecom High Bandwidth Internet Services are available to businesses of all kinds that need fast, reliable Internet backbone access at a reasonable price. Offering a variety of bandwidth and billing options, Integra delivers 24x7 Internet access at the highest level of performance for our customers. Integra's High Bandwidth Internet Services are available with the following access types:

TI Service delivers single and multiple bonded TI's » speeds from **1.544Mb** to **12Mb**

DS3 and OC-N via dedicated facilities » speeds from **45Mb** to **2.5Gb**

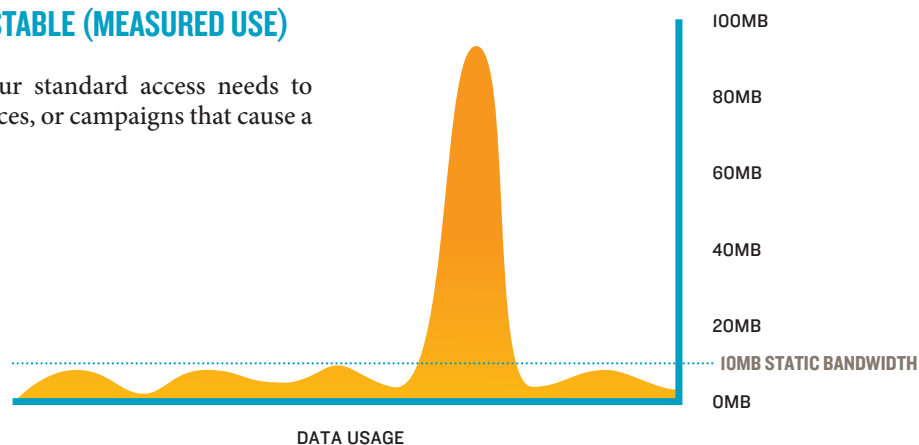

Ethernet delivers high speed access over Ethernet facilities via Integra-owned ethernet networks » speeds from **3Mb** to **10Gb**

HIGH SPEED INTERNET FEATURES AND BENEFITS

- » Integra's 20Gb Internet backbone network ensures fast, reliable service
- » Scale your bandwidth as your business grows, paying only for the bandwidth you need
- » Our Service Level Agreements are among the best in the industry and guarantee uptime, latency and packet delivery
- » Redundant & diverse routing with geographically-distributed peering to numerous other backbone providers, ensuring resiliency
- » Specialized routing options including Border Gateway Protocol (BGP) available
- » 24X7 network monitoring and support

STATIC (FLAT RATE) OR BURSTABLE (MEASURED USE)

Allows you to burst above your standard access needs to accommodate meetings, conferences, or campaigns that cause a spike in Internet traffic.

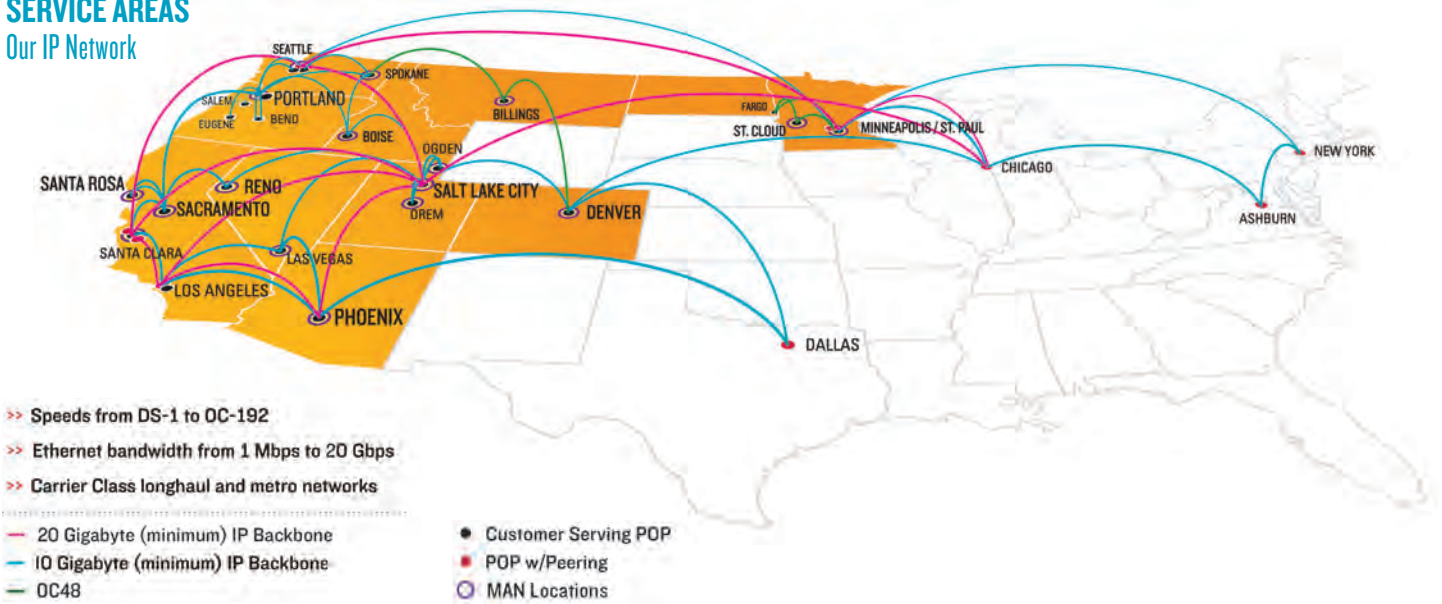

PREPARED FOR THE FUTURE

Integra has engineered its Internet backbone with virtually unlimited scalability. Featuring several diverse connections with the Internet's largest network providers, Integra's solely-owned fiber-optic backbone is designed for sudden increases in traffic and the capacity-to-utilization is carefully monitored for optimal bandwidth availability.
