

# NETWORK NOTIFICATION SERVICE

## Peace of Mind — Delivered to your Inbox.

### INTEGRA TELECOM OFFERS PROACTIVE NOTIFICATION SERVICE\*

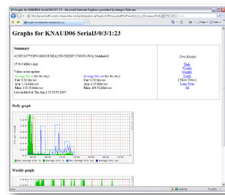

Because Integra owns and operates the physical network on which your services depend, we are able to identify, troubleshoot and resolve issues in a timely manner—often before you even know there was a problem. Occasionally, however, events occur that can interrupt your services. Integra's Network Notification Service offers proactive monitoring of your circuits and alerts you when we've detected a problem and provides status updates every hour until the issue is resolved.

- » **Save time and frustration.** We monitor your circuits and alert you when a problem occurs.
- » **Notify multiple persons.** Up to 6 contacts can be sent notifications per circuit.

### NETWORK MONITORING

Integra Telecom offers network utilization monitoring for all internet access services. The service allows you to visualize the amount of traffic traversing your circuit.

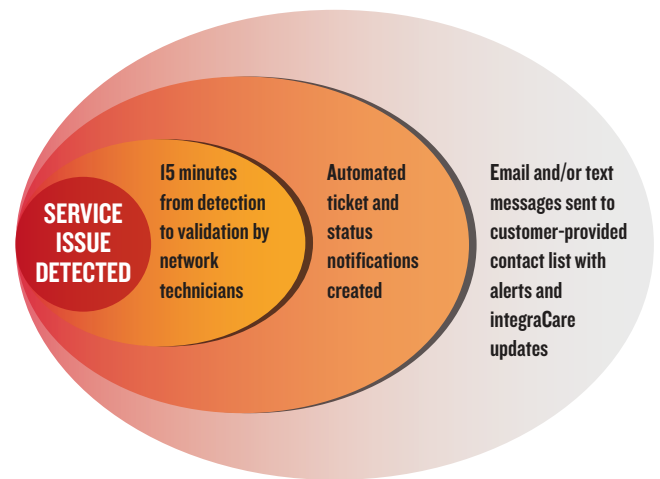

Once signed up for the service, you'll receive a private login and password to a private web site hosted by Integra where you can view daily, weekly, monthly, and yearly graphs. The data points are created every 5 minutes and show both incoming and outgoing traffic.

Integra's network utilization monitoring provides visibility into your business' Internet traffic activities:

- » **Determine if you have enough bandwidth to meet your current and future needs.**
- » **Historical data can help you to analyze trends** —Daily, weekly and seasonal.
- » **No special configuration needed by you;** Integra takes care of it all.

### HOW NETWORK NOTIFICATION SERVICE WORKS

\* Availability depends on service type. Please contact your local sales representative for details.
