

10 CHALLENGES SOLVED

BY INTEGRA'S CLOUD FIREWALL SERVICE (CFS)

Protect Your Business.

Cloud Firewall Service, the first in a comprehensive suite of Cloud Security Services from Integra, protects your business by guarding the perimeter of your network while providing inbound and outbound Internet access through a secure managed gateway. Integra's Cloud Firewall Service prevents unauthorized access to your network infrastructure, prohibits access to inappropriate web content, restricts downloads of infected files, and ensures secure use of your organization's corporate IP-VPN network. This managed service provides a consistent enforcement of security policies to all your facilities including staff working from home or on the road. Unparalleled security. Expert service.

| CHALLENGE | CFS SOLUTION |
|--|---|
| <p>My company is losing productivity because employees are spending too much company time visiting non-work related web sites.</p> | <p>CFS filters web sites based on categories so you can easily block access to inappropriate sites. Alternately, CFS can warn users that the web site may be inappropriate and allow them to proceed if desired while it logs the access. Many times warning employees is sufficient to dissuade them from spending company time surfing inappropriate web sites.</p> |
| <p>Employees are consuming excessive internet bandwidth downloading Pandora and YouTube content, and it is slowing the business applications we rely on.</p> | <p>CFS can block access to any web applications you specify, thereby conserving bandwidth for valid business uses.</p> |
| <p>Our company needs a firewall, web filtering, network antivirus and network anti-spyware, but we can't afford the capital outlay for these devices.</p> | <p>CFS is billed as a monthly charge that depends upon the features and bandwidth you utilize, allowing you to pay for what you need while conserving capital and credit.</p> |
| <p>Our business requires many of our employees to use the internet. However, we need to protect our systems from malware.</p> | <p>CFS controls your internet traffic and can block applications that are used by malware, viruses and spyware.</p> |

| CHALLENGE | CFS SOLUTION |
|---|--|
| <p>Our remote and traveling workers require secure access to the business systems available on our network.</p> | <p>CFS has an available remote access VPN client that allows mobile and/or remote users to securely access your network resources.</p> |
| <p>Our limited IT staff is so swamped administering our existing systems that they can't focus on the projects that would really propel our business forward.</p> | <p>CFS is managed and maintained by highly trained Integra personnel. If desired, your personnel may customize the policies. However, many customers elect to have Integra customize the policies for them. The bottom line is that your staff can focus on high value projects with the adoption of CFS.</p> |
| <p>There are many risky applications, such as bittorrent, on the internet. How can we allow access to the applications we need without opening up the floodgates to the risky applications?</p> | <p>CFS is based on an "application-aware" firewall. It currently identifies more than 1,600 applications, and that number is constantly growing. The service can allow or deny categories of application as well as specific applications. You can specifically block bittorrent and other risky applications while allowing the applications you want to pass through; even if they share the same port. CFS gives you control over how your network is used.</p> |
| <p>We have no visibility into what web applications our employees are using so we can't determine if they are using applications they shouldn't be using.</p> | <p>CFS' Application Visibility feature shows you the top applications being used on your network so you can quickly determine if inappropriate usage is a problem.</p> |
| <p>How can we know that CFS is based on state-of-the-art technology that will protect us against the latest threats?</p> | <p>Integra evaluated a number of firewall vendors and selected Palo Alto Networks because they are recognized by Gartner as a leader in their 2013 Magic Quadrant for Enterprise Network Firewalls. According to the report: Gartner clients consistently rate the Palo Alto Networks application identification (App-ID) and IPS higher than competitors' offerings for ease of use and quality. The firewall and IPS are closely integrated, with App-ID implemented within the firewall and throughout the inspection stream. This "single pass" is a design advantage versus unnecessary inspection that can occur in competing products that process traffic in serial order – from firewall to IPS, and then to application control.</p> |
| <p>We have a small IT staff and don't have the expertise to configure and manage firewalls, web filtering, etc.</p> | <p>CFS is configured and managed by highly trained Integra personnel. They update CFS as new application, URL filtering, antivirus, anti-spyware, and intrusion information becomes available.</p> |
